When you finish recording a live virtual classroom session, the classroom engine sends the video conversion request to our video encoding engine that merges both audio and video in to a high-quality .MP4 file format.

You will receive a notification e-mail with title "**Your Video is ready at BrainCert**". Usually, it takes few to several minutes based on the duration of the class recording.

You will then see "View Class Recording" and "Manage Recordings" link in your [Class Management](#) page.
