Server-side HTML5-based session recording without the need to install any other software browser plugins. Download recorded lessons in HD, create unique links and share with your attendees.

Step 1 : Go to <https://www.braincert.com/app/bcrooms>

Step 2 : After creating rooms, select the room name and click start meeting

Step 3 : You can see the option to record the sessions at the top of the platform. Click the same to record the session

Step 4 : After recording the session you can stop the recording with the help of an option which you can see under the gear icon in the left section

Step 5 : Now go to <https://www.braincert.com/app/bcrooms> under recordings you can find the file which is ready to share or download

Step 6 : Now click the edit option near the respective recording which you need to share or download. Now you can click share recording and enter the email ID of the recipient with whom you would like to share
